Putter Shot Dynamics of Shiftless Collatz on a Base-3 Logarithmic Spiral Green:

The Interplay Between Ball Speed (3n) and the Grain of the Green (LSB) Approaching Infinite Cups

Hiroshi Harada — March 29, 2026

Figure 1. Base-3 Putter Shot Trajectory (Seed = 27).
The trajectory is mapped onto the Base-3 logarithmic spiral green, illustrating the journey from Start (27) to the Victory Flag cup well (2^{70}).
The path color (cyan → magenta) and line thickness encode the friction index: $\mu_k = \frac{\mathrm{LSB}}{B_{\mathrm{next}}}$
A dramatic Final Break occurs when μ_k spikes, steering the ball sharply into one of the densely distributed target cups (2^N wells).
